

TAU

**A server-less unblock-able messenger
that fairly rewards your work and passion for a community**

Aug 2020

#blockchain #dht #messenger #mobile-mining #server-less #unblock-able #uncensored #permission-less #p2c #pot #decentralized

Killer app

A messenger brings information transparency and fair compensation

- A chatter “similar” to Telegram or WeChat user interface with a *bit* more ...
 - Blockchain coins circulation: each community issues FIXED 10 million coins, through which members make uncensored trades, advertisements and **money**.
 - Server-less and permission-less platform: phones form up social network independent from any central server.
 - Parallelism: there could be millions of community independent from TAU.
- Initial users are torrent video sharing fans.

Each community has value.

Discovering social value through transparent coins circulation

- Any group of digitally connected people has potential value.
- Fixed amount of crypto-coins in the group will discover such potential.
- The more loyal members join, the higher coin value is.
- When a commonwealth created, better content and service evolves.

Technology gap

Missing server-less, anti-spam and permission-less communication technology

- “Big Tech”, such as Amazon, Uber and YouTube, are centralized with **deletion** power over users **without** negotiation. Such power also exists in traditional group admins.
- Web and app servers block data transparency and community independence.
- Low scalability of crypto technologies ranging from BTC to EOS are not feasible for global consumer use.

TAU enables a server-less, permission-less, high scaling, mobile mining parallel blockchains technology.

- Communication is at the core for digital applications of messengers, Uber, Priceline or Amazon, etc.
 - Novel communication ability will incur new ideas that bring uncensored blockchain economy with fairness.
- Core communication technology innovation
 - Distributed Hash Table - TAU DHT multi-level cache over-lay communication protocol
 - Peer to Consensus - Proof of Transaction, POT, as blockchain consensus to regulate spam and hacking
 - Full mobile device mining and networking

Team and privacy

Due to nature of the innovation, we do not disclose team members.

- Technology skills
 - Big data and cryptographic processing
 - Telecom and mobile phone expertise
 - Blockchain consensus research
 - Java, c++ and android dev
- Business experiences
 - NYSE and Nasdaq listed tech companies founder
 - Committed long term mindset
 - 50 global telegram groups administrators with quarter million user registration
- All source code is open and free, except for the ONE TAU genesis secreete key.
